Issue 007

La Ceiba: More Specific Activity, Unresolved Delivery Questions

November 8, 2026

Executive Assessment

Research cut-off: November 8, 2026, Honduras. Confidence describes the stated evidence, not investment success. This targeted public-source review is not an exhaustive project, permit or transaction census.

The week adds specificity to the La Ceiba–Atlántida picture without establishing a broad improvement in development readiness. Torres Ixora's project representative describes foundation preparation; a CA-13 bridge-design listing adds procurement detail; and electricity regulation creates a concrete issue for larger users to evaluate. These are different milestones and should remain separate.

The practical question is which developments change access, operating choices or delivery conditions. This week's evidence adds detail, while site-specific feasibility and commercial outcomes remain to be established.

Infrastructure Watch

CA-13 east: design-stage procurement, not bridge construction. A procurement aggregator lists an amended expression of interest under reference HN-SIT-575368-CS-QCBS, dated November 2, with a November 17 deadline. Its reproduced scope includes bridge feasibility, engineering and environmental/social work. Issue 006 already identified bridge-design procurement: this is a notice-level follow-up, not a newly discovered corridor program. The original amended notice and its change history remain unverified. [1]

Why it matters: preparation can clarify future resilience interventions. Direction: conditionally positive for the infrastructure narrative; no current access improvement established. Confidence: moderate in the reproduced notice, limited in amendment details. Horizon: November procurement checkpoint; physical benefits undetermined.

CA-13 west: maintenance promises coexist with reported deterioration. La Prensa's November 6 report describes road-condition complaints between El Progreso and Tela and quotes the minister promising repairs and referring to awards. The article also says official award information remains unclear. Contract documents, mobilization and completed repairs were not verified. Do not combine these western works with the eastern bridge-design procurement. [2]

Why it matters: western access conditions can affect the practical tourism and logistics experience of the north coast. Direction: near-term friction; prospective repair benefit remains conditional. Confidence: moderate in attributed reporting. Horizon: weeks to months. No travel-time or valuation adjustment is quantified.

Tourism and Hospitality Watch

Honduras: tourism outlook remains an attributed national indicator. The state news service's November 4 article attributes an $820–840 million full-year tourism-receipts projection to the tourism minister and cites preliminary first-half visitor growth. These are neither completed annual receipts nor a measure of overnight demand in Atlántida. [3]

Why it matters: national momentum can support investor attention, but cruise visitors, overnight guests and destination-level spending must be separated. Direction: positive national context; local demand effect

unestablished. Confidence: high in the published attribution, lower in the forecast outcome. Horizon: year-end reporting and subsequent revisions.

Regional developer activity: distinguish stages within one portfolio. November 3–4 reporting attributes to Fernando Poma a land purchase and Marriott agreement for an Antigua Guatemala hotel, targeted for 2029. It also describes other regional hotel plans and coastal exploration in El Salvador. These remain attributed statements; deeds, contracts, financing and individual construction stages were not independently inspected. [4]

Why it matters: regional hospitality developers are describing a pipeline, with projects competing for capital and execution resources. Direction: positive regional institutional activity, with competitive implications; no Honduras mandate inferred. Confidence: moderate in reported statements. Horizon: multi-year. The related media versions are syndication, not separate corroboration.

La Ceiba–Atlántida Continuity Watch

Item	Evidence position
Torres Ixora	Engineer-reported preparation; seek dated site evidence, stage denominator and schedule comparison.
Próspera Satuyé	Conflicting agreement-status reporting; seek authoritative current documents, municipal/environmental position and financing/execution evidence.
Golosón International Airport	No material new capacity or modernization milestone established in this screening. Training or a scheduled flight listing is not expanded delivered capacity.
Puerto de Cabotaje	No verified new dredging, wreck-removal or rehabilitation completion established. Track awards, physical work and navigability separately.
Ferry terminal / Bay Islands	Operators continue to publish services; no verified capacity change established. Dream lists about 90 minutes for La Ceiba–Roatán and one hour for La Ceiba–Útila; schedules are not passenger volumes or service guarantees. [11]
CA-13 / La Ceiba–Puerto Castilla	Track amended design notice separately from western patching and expansion programs.
Coastal protection / drainage	No material new completed intervention established. Site-specific flood and drainage assessment remains necessary.
New hospitality, residential, mixed-use, industrial, logistics and tourism projects	No additional local project crossed a verified execution threshold in this review. Announced uses do not establish approved uses.
Significant Atlántida coastal land acquisitions	No verified closed transaction established. Absence from reviewed sources is not proof that none occurred.

Capital, Regulation and Development Watch

Electricity: a concrete eligibility rule deserves attention. CREE's signed Agreement CREE-97-2026, adopted October 30 and indexed by ENAG in the November 2 Gazette, sets the maximum-demand value that distribution-connected users must exceed at 400 kW, and the corresponding value for transmission-connected users at 0 kW. It provides for applications for classification and registration; eligibility is not automatic approval. [5][6]

Why it matters: a resort, industrial or mixed-use evaluator may need to revisit electricity-procurement options, subject to its load, connection and regulatory requirements. Direction: potentially positive for eligible users' supply choices; no cheaper power, network capacity or reliability improvement is established. Confidence: high in the document's stated thresholds. Horizon: near-term regulatory review and project-specific implementation.

Amnesty: a dated due-diligence checkpoint. Congress reports that Decree 226-2026, published November 2, extends specified amnesties through December 31. Applicability, covered periods, principal obligations and payment conditions require case-specific confirmation. This is a possible regularization window, not cancellation of all liabilities. [7]

Why it matters: counterparties should verify liabilities and obtain current clearances rather than assume clean status. Direction: potentially helpful for eligible regularization; no automatic asset-price effect. Confidence: high in the official announcement, incomplete on individual eligibility. Horizon: before December 31.

Atlántida Focus

Torres Ixora: a more detailed account of site activity. In the video transcript supplied by Fernando and reviewed November 5, the project's engineer reports excavation of approximately 2.40 metres, rock replacement and foundation/soil-improvement work at Beta. The recording date remains unconfirmed. The "60%" figure occurs in that discussion but its exact denominator is unclear: it is not evidence of 60% total completion or 60% sold. Subsequent foundation slabs should not be described as completed. [8]

Why it matters: this is a more specific execution lead than the earlier groundbreaking ceremony. Direction: conditionally positive for local project activity; financing, permits, sales and schedule remain separate questions. Confidence: high in what the supplied transcript says; construction quantities and completion uncorroborated. Horizon: subsequent dated site updates. The reported 13 remaining units and presale deadline do not verify closed sales. The advertisement's 30% appreciation claim is unsupported by evidence reviewed.

Próspera Satuyé: conflicting status requires verification. A November 5 investigation links a cooperation-document copy and reports an official saying no agreement is currently in force. The linked copy bears a July 17 date and a court-filing stamp; those markings do not establish current enforceability. [9][10]

Why it matters: uncertainty about institutional support, legal status, consultation and delivery can influence how investors interpret nearby project claims. Direction: uncertainty/risk flag, not a finding of approval or cancellation. Confidence: moderate in the documented conflict, low in current operative status. Horizon: 30–90 days. No financed or physically executing Satuyé investment was established by this review.

RE/MAX portal, Monte Real del Bosque, ID 003053055019: Page displays $1,000,000 and 20 manzanas / 139,445.65 m²: $50,000 per stated manzana, calculated. Claimed residential, commercial or tourism suitability. [12] Asking price, not appraisal or closing. No change from Issue 006's quoted ask established. Availability and permitted use unverified.

Same RE/MAX record: Listing field says RE/MAX Alliance; page also displays HONCASA branding and Manrique Ruiz. [12] Routing/branding discrepancy worth checking; insufficient evidence of a broker transfer or a separate parcel. Promotional east-growth language remains a broker claim.

Realtor.com, Bonitillo ID 310109926128: Page says offline/nonexistent, with several possible reasons. [13] Not proof of a sale. No removal date, closing price or replacement broker established.

Inmobiliaria JAYE, prior Satuyé URL: Returns a missing-page message. [14] Broken URL does not establish withdrawal or sale. No relisting linked to a parcel identity.

No verified asking-price change, broker transfer or duplicate-parcel match was established. Listing start dates are unavailable for these records; time since our observation is not days on market. This is a small monitored sample, not a liquidity index.

Strategic Implications

For investors and operators evaluating the corridor, the most useful distinction is between reported activity, administrative progress and delivered infrastructure. These stages affect different decisions and should not be treated as interchangeable.

Electricity eligibility warrants project-specific analysis; road maintenance and bridge design warrant separate delivery checks. National tourism projections and regional hotel pipelines provide context, while local overnight demand and completed transactions remain the more direct commercial tests.

Institutional Source Check

COHEP: October bulletin, posted November 2, reviewed for policy and investment leads. Its discussion of industrial policy and beneficial-ownership registration is background for further verification, not evidence of funded Atlántida projects. [15]

U.S. Embassy: direct website access was blocked. A secondary report reproduces an Embassy statement about an investment-climate meeting in San Pedro Sula; no project or committed capital identified. Publication and embedded-post dates differ, so no exact meeting date is asserted. [16]

AMCHAM Honduras: public/indexed material checked; direct site retrieval was incomplete. No consequential new local investment signal established. Coverage limitation remains visible. [17]

Atlántida Chamber: public-source searches surfaced earlier infrastructure advocacy, but no new primary announcement meeting the inclusion threshold. Fernando’s earlier conversations remain attributed leads, not evidence that no regional resource exists.

Regional Coverage

Guatemala, El Salvador and Panama enter through the Poma pipeline above. Costa Rica’s November flight schedule is a useful baseline, but no like-for-like capacity change was established. No additional qualifying weekly signal was established in the targeted Belize, Nicaragua, southern Mexico or Caribbean screening; this is a coverage-limited result, not a claim of inactivity. Older announcements were not repackaged as this week’s changes.

Recommended Actions

1. Preserve the Ixora transcript and review date; seek a dated progress source before upgrading its evidence status.

2. Retrieve the original CA-13 amendment and any award/mobilization documents; do not merge separate road programs.

3. For a concrete large-user scenario, verify load, connection and CREE registration requirements before modeling electricity savings.

4. Check Satuyé’s current operative documents and agency positions before citing institutional endorsement.

5. Continue dated listing snapshots; request transaction evidence before using a listing as a closed comparable.

Watch Items — Next 30–90 Days

November 17 bridge-consultancy deadline, subsequent shortlist/award and original notice history.

Evidence that promised western CA-13 repairs mobilize and finish.

Ixora progress against a dated baseline, permits, financing and independently supported sales measures.

Satuyé legal/municipal/environmental documentation and any verifiable capital or physical execution.

December 31 amnesty deadline and project-specific electricity-registration implementation.

Destination-level overnight stays, spending and sustained services rather than national visitor totals alone.

Bottom Line

La Ceiba’s development picture is gaining detail. The investment judgment still depends on converting statements, rules and procurement steps into verified, project-specific delivery evidence.

GH Perspective

For Granadita Horizon, the reviewed developments inform regional context. They do not establish a change in valuation, liquidity, buyer demand or sale timing. Land use, access, utility capacity and coastal relationships remain matters for property-specific diligence.

Evidence Status

These labels describe what the reviewed evidence establishes for each claim below. They are not a ranking of project quality or investment value.

Torres Ixora

Engineer-reported excavation and foundation preparation.

Reported Activity | Watch Item

Video transcript supplied by Fernando; recording date and quantities not independently corroborated.

Reviewed: 2026-11-08 | [8]

CA-13 bridge design

Secondary reproduced procurement amendment.

No milestone established | Watch Item

Original amendment and change history not verified; not physical construction.

Reviewed: 2026-11-08 | [1]

CREE-97-2026

Signed regulator document reviewed; Gazette index identifies publication.

No milestone established | Watch Item

Regulatory evidence only; not a financing or physical milestone. Qualification and supply economics remain project-specific.

Reviewed: 2026-11-08 | [5], [6]

Satuyé

Conflicting reporting about cooperation agreement status.

No milestone established | Watch Item

Current operative status unresolved; no financed execution established.

Reviewed: 2026-11-08 | [9], [10]
